

Container Bootcamp

The Future

INNOQ

Microservices as mainstream approach

Backlash is inevitable

**The vendors and their
promises are coming**

**PaaS + Cloud will increase
adoption**

Common standards for runtime aspects

**{Docker | K8s | ...} all the
things**

Common standards for logging, metrics, monitoring, configuration

**Abstraction level will
continue to rise**

Ready2Use Cloud Applications

Micro- Microservices as FaaS

Trend towards slim Frameworks and Prg-Languages

**Cloud vendor services are
losing relevance, while
Kubernetes
app-marketplaces are
becoming more important**
